

MVP Ticket Board

P0 — Foundation and first working demo

P0-01: Monorepo and app scaffolding

Goal: Create the initial codebase structure.

Includes: - monorepo setup - app folders for admin web, member web, API - shared packages for UI, DB, types, config, auth - linting, formatting, TypeScript config - environment variable strategy - basic CI checks

Done when: - repo boots locally - apps run independently - shared packages resolve cleanly

P0-02: Auth and session foundation

Goal: Support secure login/session handling for MVP.

Includes: - email/password auth - session handling - password reset - role-aware session shape - owner, coach, customer role support

Done when: - users can sign in/out - protected routes work - session exposes role and workspace context

P0-03: Workspace and gym onboarding

Goal: Let owners create a gym workspace and basic setup.

Includes: - owner signup - workspace creation - gym name, address, timezone, logo, business type - one-location-only setup - onboarding checklist scaffold

Done when: - owner can create workspace and land in admin shell

P0-04: Role and staff management

Goal: Enable owner to invite and manage staff.

Includes: - invite coach flow - resend invite - deactivate staff - role assignment - basic permissions middleware

Done when: - owner can invite a coach and coach can accept invite

P0-05: Admin shell and navigation

Goal: Establish the main admin UI shell.

Includes: - sidebar nav - top bar - page layout primitives - loading, empty, error state patterns

Done when: - all admin pages can render inside a consistent shell

P0-06: Domain schema foundation

Goal: Create the minimum DB schema for core entities.

Includes: - workspaces - locations - rooms - staff - roles - workspace settings - invite model

Done when: - migrations run cleanly - schema supports first functional flows

P0-07: Program management

Goal: Owners can create and manage programs.

Includes: - program CRUD - age/level metadata - enable/disable progress tracking per program - assign default coaches

Done when: - owner can create programs and use them in schedule setup

P0-08: Room management

Goal: Support one location with optional multiple rooms.

Includes: - room CRUD - room capacity metadata - room activation toggle

Done when: - schedule builder can reference rooms

P0-09: Schedule templates and weekly schedule

Goal: Build the recurring schedule system.

Includes: - class template CRUD - recurring weekly pattern support - class capacity - booking cutoff - cancellation cutoff - default coach assignment - room assignment

Done when: - owner can publish a weekly schedule from templates

P0-10: Single instance schedule editing

Goal: Support real-world schedule changes.

Includes: - edit one class instance - cancel class instance - reschedule class instance - edit recurring series

Done when: - owner can manage day-to-day schedule changes cleanly

P0-11: Substitute coach workflow

Goal: Handle coach substitutions.

Includes: - owner reassigns class coach - coach requests substitute - class reflects current assigned coach - optional notification hook placeholder

Done when: - class ownership can be changed cleanly

P0-12: Member model and member profile

Goal: Create trusted member records.

Includes: - member CRUD - member statuses - internal notes - tags - profile summary screen - searchable list

Done when: - owner can create, view, search, and edit member profiles

P0-13: Guardian/child basics

Goal: Support simple family relationships.

Includes: - guardian profile - child profile link - one child with up to two guardians - guardian pays by default - guardian books for child

Done when: - owner can link guardians and children in member records

P0-14: Trial booking flow

Goal: Allow prospects to book a trial.

Includes: - public trial page - choose program - choose class - enter details - confirmation flow

Done when: - public user can successfully submit a trial booking

P0-15: Waiver and form management foundation

Goal: Create the forms framework.

Includes: - document type model - waiver, membership agreement, guardian waiver, custom form types - versioning model - owner upload flow for PDFs - signature provider abstraction placeholder

Done when: - owner can upload versioned forms and assign them to relevant flows

P0-16: Signature request and signed-document tracking

Goal: Track signatures against form versions.

Includes: - signature request lifecycle - signed status - signed-at metadata - signer identity linkage - member/guardian form status UI

Done when: - product can record whether required forms are signed for a user

P0-17: Booking portal foundation

Goal: Allow members to browse and book classes.

Includes: - member login - responsive member shell - browse schedule - filter classes - book class - cancel booking - upcoming bookings list

Done when: - member can book and cancel a class from the portal

P0-18: Waitlist support

Goal: Support full classes gracefully.

Includes: - join waitlist - waitlist ordering - promote from waitlist manually or via rule hook - waitlist status UI

Done when: - full classes can accept waitlist entries and show correct state

P0-19: Coach dashboard and roster

Goal: Enable coaches to run classes.

Includes: - today's classes - roster view - trial badges - notes visibility - class detail screen

Done when: - coach can open a class and see the roster clearly

P0-20: Attendance workflow

Goal: Let coaches record attendance quickly.

Includes: - present/late/absent/no-show states - add walk-in - add trial attendee - post-class notes - attendance history link to member profile

Done when: - coach can complete class attendance end-to-end

P0-21: Owner dashboard basics

Goal: Give owners a useful first dashboard.

Includes: - active members count - today's classes - today's trials - failed payment count placeholder - urgent attention widgets - quick actions

Done when: - owner landing page feels operationally useful

P1 — Live operations, money, and customer self-service

P1-01: Membership plan model

P1-02: Drop-in product support

P1-03: Punch card support

P1-04: Stripe integration foundation

P1-05: Billing ledger and actionable billing records

P1-06: Membership assignment and lifecycle

P1-07: Freeze workflow

P1-08: Cancellation workflow

P1-09: Failed payment recovery queue

P1-10: Credits and partial refunds

P1-11: Member billing self-service

P1-12: Self-serve freeze/cancel request controls

P1-13: Messaging foundation

P1-14: Broadcast announcements

P1-15: Automated email reminders

P1-16: Events support

P1-17: Private lessons support

P1-18: Reporting basics

P2 — Replacement credibility and migration depth

P2-01: Belt and stripe module

P2-02: Child account upgrade workflow

P2-03: Full invoice history toggle

P2-04: Raw import pipeline

P2-05: Field mapping UI

P2-06: Validation engine

P2-07: Import preview and dry run

P2-08: Zen Planner import preset

P2-09: Historical operations import

P2-10: Reconciliation and cutover checklist

Recommended implementation order

1. P0-01 to P0-06
2. P0-07 to P0-11
3. P0-12 to P0-16
4. P0-17 to P0-21
5. P1-01 to P1-10
6. P1-11 to P1-18
7. P2-01 to P2-10
